Objective

Dynamic and results-driven fresher with a strong work ethic, determination, and excellent delegation skills. Actively seeking opportunities in a forward-thinking organization or freelancing projects where I can leverage my technical expertise and contribute to impactful innovations.

Education

Bachelor of Technology (B.Tech) Vel Tech Rangarajan Dr. Sagunthala R&D Institute of Science and Technology, Avadi Course: Computer Science and Engineering	CGPA: 7.6/10.0	2022-2025
Diploma Government Polytechnic College, Jammalamadugu Course: Mechanical Engineering	CGPA: 7.7/10.0	2019-2022
School Education Deepthi High School, B.Mattam	CGPA: 8.5/10.0	2018-2019

Skills

- **Programming Languages:** Java, Python
- **Web Technologies:** HTML, CSS, JavaScript
- **Tools and Technologies:** Docker, Jenkins, Kubernetes, Git, ArgoCD, OpenStack
- **Cloud Platforms:** AWS, Google Cloud
- **Operating Systems:** Linux/Windows
- **Web Frameworks:** Python Flask, Java Spring Boot
- **Databases:** MySQL, MongoDB
- **Soft Skills:** Leadership, Communication, Quick Learner, Team Player

Projects

- **Secure Cloud-Based Healthcare System**
Developed a secure and privacy-preserving healthcare system that ensures encrypted data storage, secure search capabilities, and role-based access control. The system employs AES-256 encryption for patient data protection, searchable symmetric encryption for secure queries, and digital signatures for data integrity. Designed for seamless collaboration between healthcare providers while maintaining strict confidentiality and compliance with healthcare security regulations.
- **Banking Application**
Developed a secure and user-friendly banking application that enables users to create accounts, manage transactions, transfer funds, and view detailed account information. The application includes robust authentication mechanisms, ensuring data privacy and security. Administrators can perform account management operations such as customer verification, account updates, and transaction monitoring.
- **Blood Cancer Detection Using CNN**
Designed and implemented a deep learning system utilizing Convolutional Neural Networks (CNN) to analyze and classify blood sample images. The system achieves high accuracy in detecting early signs of blood cancer, aiding in timely diagnosis and treatment. The project involved extensive preprocessing of medical image datasets and fine-tuning CNN architectures for optimal performance.
- **Medical Cost Insurance Prediction**
Developed a predictive analytics system using machine learning algorithms to estimate medical insurance costs based on patient demographics, health conditions, and lifestyle factors. The project included data preprocessing, feature engineering, and model optimization to improve prediction accuracy. This system helps insurance companies create better pricing strategies and manage risk effectively.

Certifications

- Python Programming Development Internship
- IBM z/OS Mainframe Practitioner
- Goldman Sachs - Software Engineering Job Simulation (Forage)
- Hands-on Linux Online Course (Frontlines EduTech Private Limited - FLM)
- AWS APAC - Solutions Architecture Job Simulation (Forage)
